Introduction

What is Bioinformatics?

According to Luscombe et al.: **Bioinformatics** involves the technology that uses computers for storage, retrieval, manipulation, and distribution of information related to biological macromolecules such as DNA, RNA, and proteins [1].

Bioinformatics

14

Bioinformatics

Where is DNA located?

15

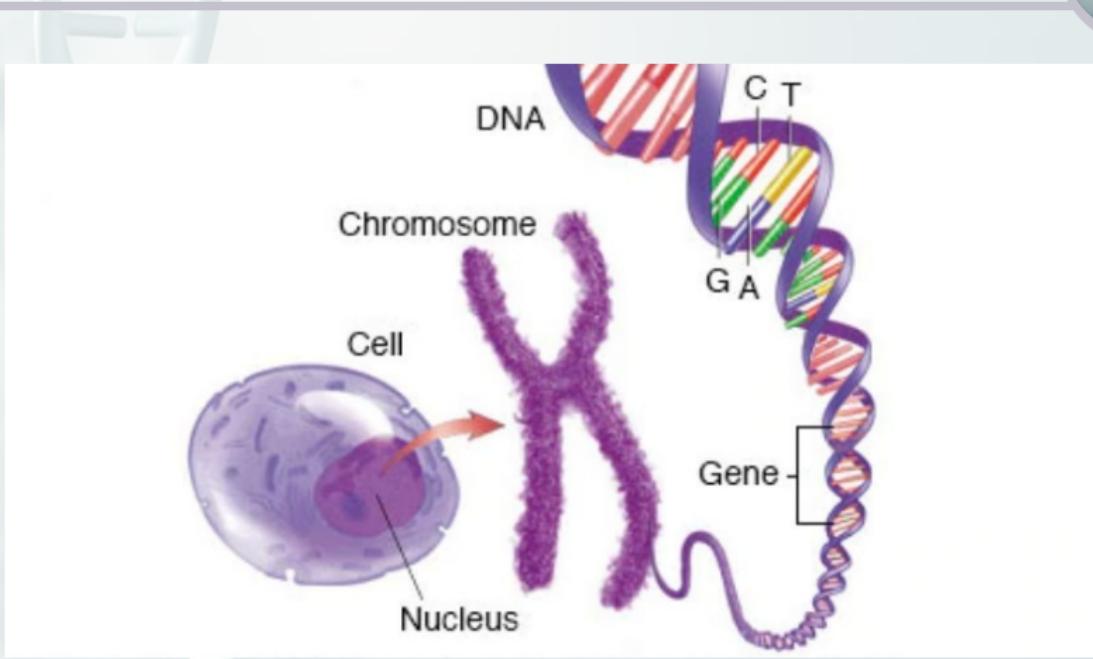

Figure: Where DNA is located [2].

Bioinformatics

DNA structure

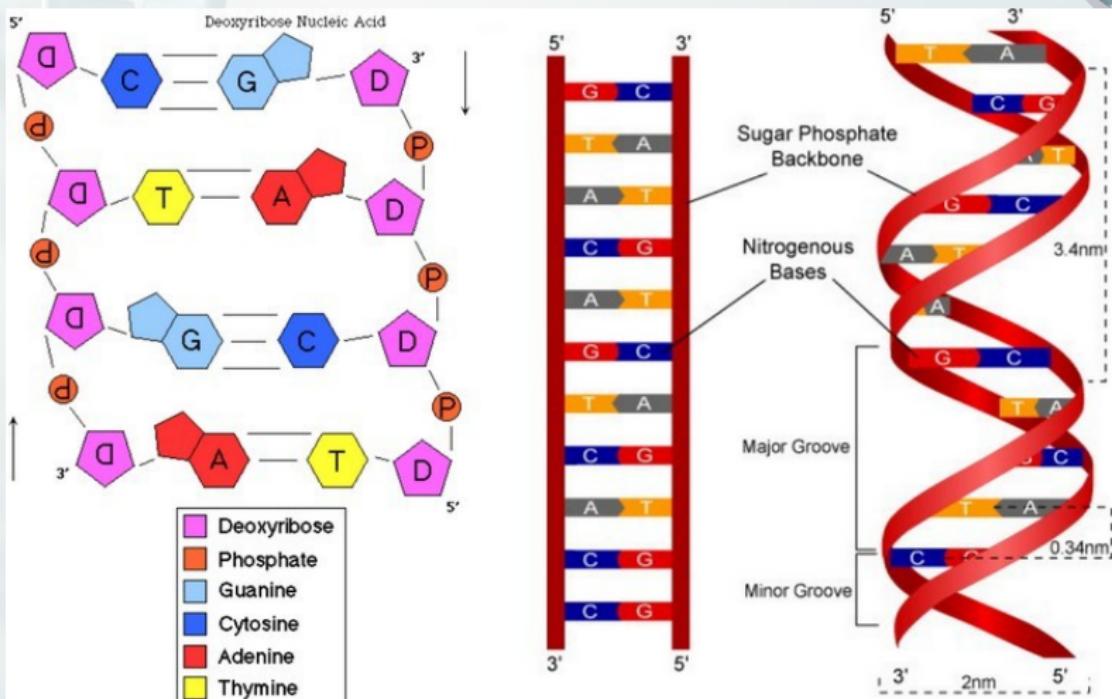

Figure: DNA structure [3].

The human genome is made of **~3.2 billions bp** of DNA.
~6.4 billions of nucleotides [4].

The human genome is made of **~3.2 billions bp** of DNA.
~6.4 billions of nucleotides [4].

The HIV-1 genome is made of **~20k bp** of DNA.
Meanwhile, the COVID-19 is made of **~32k bp** [5].

The human genome is made of **~3.2 billions bp** of DNA.
~6.4 billions of nucleotides [4].

The HIV-1 genome is made of **~20k bp** of DNA.
Meanwhile, the COVID-19 is made of **~32k bp** [5].

There are approximately **19000 to 25000** genes.
No one knows for sure [4].

Protein structure prediction

Definition

Definition

The prediction of protein three-dimensional structure from amino acid sequence [8].

Protein structure prediction

Definition

Definition

The prediction of protein three-dimensional structure from amino acid sequence [8].

Methods

- ▶ X-ray crystallography.
- ▶ Nuclear magnetic resonance.
- ▶ Cryo-electron microscopy.

Protein structure prediction

Using computers

There are two approaches to predicting protein structures:

- ▶ Homology modeling.
- ▶ Physical modeling.

How to learn Bioinformatics?

Drug discovery

Definition

Definition

Drug discovery is the process by new candidate medications are discovered [12].

Molecular docking

Molecular docking is a computer simulation procedure to predict the conformation of a receptor-ligand complex [13]

Algorithms used:

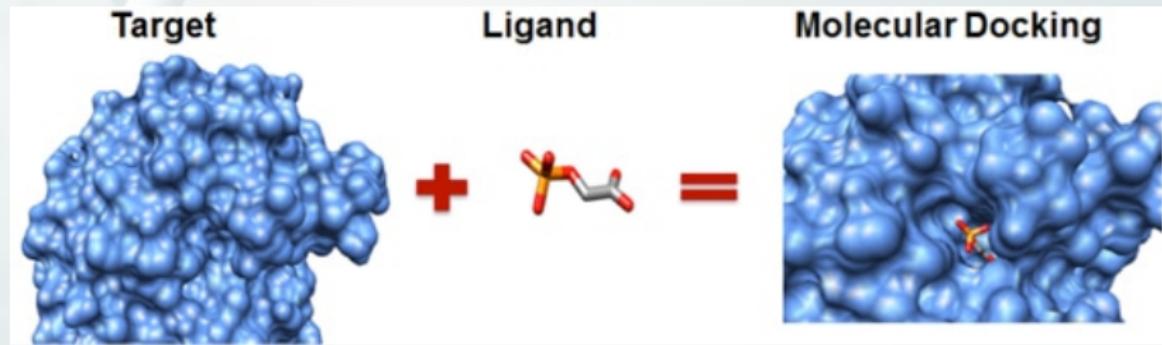

- ▶ Fast shape matching (take into account the geometric).
- ▶ Simulated Annealing.
- ▶ Genetic algorithms.
- ▶ Tabu search.
